

Commitment and Enthusiasm – Higher with lower emissions

This year 2023 N Rent Oy has invested and received 17 pcs new Mobile Elevating Platforms, i.e. boom lifts and scissor lifts. Of which 12 pcs by reach 10–28 m, are modern battery powered and the other 5 pcs by reach 28–40 m, modern diesel powered with catalytic converter and meet Tier IV emission requirements, using renewable diesel.

All Year 2023 carbon footprint offset

In addition to the investments for latest technology, we have entered into an agreement with the Finnish Hiilinielurekisteri.fi to reduce the carbon footprint of N Rent Oy and the remaining carbon emissions have now been offset. Meaning that all services provided by N Rent Oy will be carbon neutral by 2023 and onwards until new emission free technology is more available.

Practicality and common good

To offset the carbon footprint, we have partnered with Finnish forest owners who use ash as fertiliser, which is recycled back into nature to increase forest growth and thereby increase the carbon sink for the benefit of us all.

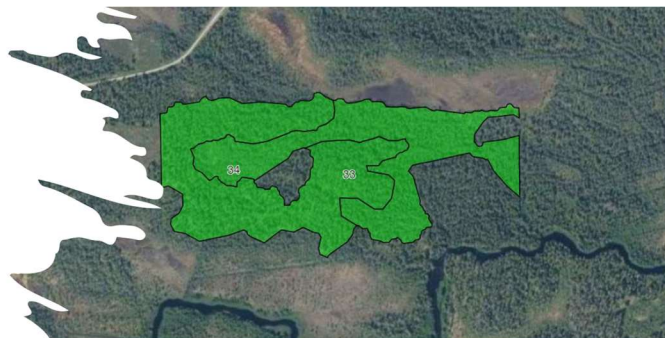

Thank you for your environmental actions by offsetting your carbon dioxide emissions in the Carbon Sink Register.

Here is a map and an aerial view of the carbon sink, where this compensation has been implemented.
